Dr. Warren Weaver The Reckefeller Foundation 49 West 49th Street New York, New York

Dear Warrens

Since the publication of our protein paper Dr. Niemann and I have received a number of letters regarding it, in addition to a great many requests for reprints. I have thought that you might be interested to read some of these comments, and I am enclosing a copy of the remarks made by Homer Adkins and by Todd. The letters have all been in this vein.

submitted by Dr. Wrinch to Lamb for publication in the Journal.

Lamb sent it to us, in order that we might make any comments we desired.

We pointed out that the rebuttal contained no new material, except

for a few statements, all of which we felt to be either inserrest or

trivial. We suggested that Lamb might accept for publication in the

Journal a clear and concise rebuttal to our paper, but not one of the

sort submitted. We have heard nothing about this for some time now, and

I think that perhaps no response will appear.

Wrinch's work has indeed caused a great deal of attention to be focused on the fundamental problem of protein chemistry, that of the structure of protein melecules. I hope that the work which we are carrying on now, which is progressing nicely, will help in the solution of this problem.

With best regards, I am

Sincerely yours.

"..... Soldom have I read a paper which gave me such pleasure as that
by Dr. Pauling and yourself on the structure of proteins. Many of us
have reached the same conclusion at which you arrived, but your expesition
of the ridiculousness of the Wrinch hypotheses was badly needed and
greatly appreciated."

Homer Adkins

"My intention to write you has erystallised since the latest number of the J.A.C.S. arrived. I must say that I derived enormous enjoyment from reading "The De-bunking of Wrineh" by Pauling and Mismanni It really was high time that somebody put the case against the cyclel theory in definite terms, and I think that all chemists here at least will welcome it. As far as I can see, the case is unanswerable and I shall be intrigued to see what response, if any, it will evoke from Wrineh. ....."

Professor A. R. Todd
